

MAINTENANCE MANAGEMENT

MNE012

COURSE DESCRIPTION

The Maintenance Management course is designed to provide participants with a comprehensive understanding of the principles, strategies, and best practices in the field of maintenance management. This course will cover key aspects of maintenance, including preventive and predictive maintenance, asset management, reliability-centered maintenance, and the utilization of advanced technologies for effective maintenance planning and execution. Participants will gain insights into optimizing maintenance processes to enhance equipment reliability, reduce downtime, and improve overall operational efficiency.

COURSE OBJECTIVES

By the end of the course, participants will be able to:

- Understand the fundamental concepts and principles of maintenance management.
- Implement preventive and predictive maintenance strategies to enhance equipment reliability.
- Develop effective maintenance plans and schedules to minimize downtime.
- Utilize asset management techniques to optimize the lifecycle of equipment.
- Apply reliability-centered maintenance (RCM) principles to improve maintenance decision-making.
- Familiarize themselves with the latest technologies in maintenance, such as condition monitoring and predictive analytics.
- Enhance the skills necessary for effective communication and collaboration within maintenance teams.
- Analyze and optimize maintenance processes to improve overall operational efficiency.
- Develop strategies for managing spare parts inventory and procurement in maintenance activities.
- Demonstrate an understanding of safety, regulatory compliance, and environmental considerations in maintenance operations.

WHO SHOULD ATTEND

The Maintenance Management course is suitable for professionals involved in maintenance activities across various industries, including but not limited to:

- Maintenance Managers and Supervisors
- Reliability Engineers
- Plant and Facility Managers
- Maintenance Planners and Schedulers

- Maintenance Technicians
- Asset Managers
- Operations Managers
- Industrial Engineers
- Anyone involved or interested in optimizing maintenance processes and improving equipment reliability.

COURSE DURATION

5 Working Days

COURSE OUTLINES

1. Introduction to Maintenance Management

- Definition and importance of maintenance management
- Key principles and concepts

2. Types of Maintenance

- Preventive maintenance
- Predictive maintenance
- Corrective maintenance

3. Maintenance Planning and Scheduling

- Developing effective maintenance plans
- Creating maintenance schedules
- Minimizing downtime through efficient planning

4. Asset Management

- Asset lifecycle management
- Equipment criticality analysis
- Performance metrics and key performance indicators (KPIs)

5. Reliability-Centered Maintenance (RCM)

- RCM principles and methodology
- Implementing RCM in maintenance decision-making

6. Technological Advances in Maintenance

- Condition monitoring
- Predictive analytics
- Internet of Things (IoT) in maintenance

7. Communication and Collaboration in Maintenance Teams

- Team dynamics and communication skills
- Cross-functional collaboration

8. Process Optimization in Maintenance

- Analyzing and improving maintenance processes
- Lean maintenance principles

9. Spare Parts Management

- Inventory management
- Procurement strategies

10. Safety, Compliance, and Environmental Considerations

- Safety regulations in maintenance
- Compliance with industry standards
- Environmental considerations in maintenance activities

arctic
